This is a demo file for pandoc-crossref. With this filter, you can cross-reference figures (see figs. 2 to 4), display equations (see eq. (1)), tables (see tbl. 1) and sections (secs. 1, 2 and 4.1 to 4.3)

For immediate example, see fig. 1

Figure # 1: A figure

There is also support for code blocks, for example, lsts. 1 to 3

It’s possible to capitalize reference prefixes, like this: Fig. 2.

In case of multiple references, capitalization is determined by first reference. Figs. 2 and 3 is capitalized, while figs. 2 and 3 is not.

It is also possible to mix different references, like fig. 2, tbl. 1, lsts. 1 and 2, figs. 3 and 4, which will be grouped in order they are specified. You can even intermix this with regular citations, although it’s not recommended: fig. 2, tbl. 1, [unprocessedCitation]

You can also have custom chapter reference labels, like sec. 6.1

Subfigures are supported, see figs. 6 and 6b
1 Chapter 1. Figures

Figure # 2: First figure

Figure # 3: Second figure

2 Chapter 2. Equations

Display equations are labelled and numbered

\[ P_i(x) = \sum_i a_i x^i \]  \hspace{1cm} (1)
Figure # 4: Third figure

Figure # 5: Unlabelled image
Figure # 6: Subfigures caption
Since 0.1.6.0 those can also appear in the middle of paragraph

\[ ax^2 + bx^2 + c = 0 \]  

like this.

3 Chapter 3. Tables

Table 1: Table example

<table>
<thead>
<tr>
<th>First Header</th>
<th>Second Header</th>
</tr>
</thead>
<tbody>
<tr>
<td>Content Cell</td>
<td>Content Cell</td>
</tr>
<tr>
<td>Content Cell</td>
<td>Content Cell</td>
</tr>
</tbody>
</table>

Table without caption:

<table>
<thead>
<tr>
<th>First Header</th>
<th>Second Header</th>
</tr>
</thead>
<tbody>
<tr>
<td>Content Cell</td>
<td>Content Cell</td>
</tr>
<tr>
<td>Content Cell</td>
<td>Content Cell</td>
</tr>
</tbody>
</table>

4 Chapter 4. Code blocks

There are a couple options for code block labels. Those work only if code block id starts with `lst:`; e.g. `{#lst:label}

4.1 caption attribute

caption attribute will be treated as code block caption. If code block has both id and caption attributes, it will be treated as numbered code block.

Listing 1 Listing caption

\begin{lstlisting}[language=Haskell]
main :: IO ()
main = putStrLn "Hello World!"
\end{lstlisting}
4.2 Table-style captions

Enabled with codeBlockCaptions metadata option. If code block is immediately adjacent to paragraph, starting with Listing: or :, said paragraph will be treated as code block caption.

Listing 2 Listing caption
main :: IO ()
main = putStrLn "Hello World!"

4.3 Wrapping div

Wrapping code block without label in a div with id lst:... and class, starting with listing, and adding paragraph before code block, but inside div, will treat said paragraph as code block caption.

Listing 3 Listing caption
main :: IO ()
main = putStrLn "Hello World!"

Unnumbered chapter.

This chapter doesn’t change chapter prefix of referenced elements, instead keeping number of previous chapter, e.g.

\[ S(x) = \int_{x_1}^{x_2} ax + b \, dx \]  \hspace{1cm} (3)

5 Chapter 5. Reference lists

It’s also possible to show lists of figures and tables, like this:

List of Figures

1 A figure ................................................................. 1
2 First figure .......................................................... 2
3 Second figure ......................................................... 2
4 Third figure .......................................................... 3
5 Unlabelled image ..................................................... 3
6 Subfigures caption .................................................... 4
List of Tables

1 Table example ........................................ 5

List of Listings

1 Listing caption ........................................ 5
2 Listing caption ........................................ 6
3 Listing caption ........................................ 6

6 Appendix A. Custom labels

6.1 This section will have custom label
